## Abstract

In the presentation we are going to share ideas how to translate science into business by following Magister Solutions' evolution from academia to industry environment. In the current economic situation the importance of R&D is emphasized as the ones who invest now are most likely to be the leaders in technology once the economic situation turns for the better. We are going to cover business model, tools and projects that have taken Magister Solutions where it is now and going to be in the future. Special attention will be devoted to highlight current market and performance situation on leading topics in 3GPP for LTE and HSPA. In the conclusion we are going to present innovative mobile software projects developed by our subsidiary company – Versine.

**Index Terms:** Science, Business, 3GPP, LTE, HSPA, Simulations.
