Qt Contributions in Many Shapes and Forms

Knut Yrvin

Nokia, Qt Development Framework
Norway
knut.yrvin@nokia.com

Abstract

Knut Yrvin will give an overview of community contributions to Qt and activities done to make contributions more easy. Several contributions are core for making hybrid Internet applications and multimedia support. Qt at Nokia has recently launched the Qt Project as Open Governance, providing transparent and equal access to all. This is finalising a three year effort opening up Qt and adding the LGPL license option early 2009. The talk reflects back on the opportunity for open innovation done with open governance.
