Abstract

This speech/workshop is thought to be a small introduction about MeeGo Touch Framework, in which the assistants will create a complete small application using the framework to demonstrate of its most appealing features. The whole application creation cycle is demonstrated from the initial mockups to implementation and unit testing to supporting localization, portrait/landscape support and multiple resolutions. Two developers of MeeGo Touch team will guide you in creating an application using the same technologies and practices the team utilizes. After this seminar you will have enough knowledge to create your own application using MeeGo Handset UX.
