Abstract

On summer student's school Hands Free Email application creation was offered for popularization and expansion of possibilities MeeGo. The project is aimed at user value of devices under MeeGo control increase. This could be achieved by creating the convenient and effective software to expand possibilities of work with audio and video. The first program created within the project realizes the following functionality:

- Receiving main from network
- Received answer decoding
- Audio file generating
- Synthesized speech reproduction

Application workflow:

Someone sends you the letter ►► Letter waits for you on the mail server ►► Hands Free Email delivers the letter to your device and reads to it to you aloud

Index Terms: MeeGo, Hands Free, Application, Email, Wireless Laboratory.
