Abstract

Smart-M3 is a platform for development and deployment of smart spaces application. The main goal of this project is the development of Smart Board demo application for the MeeGo operating system through the Smart-M3 smart spaces platform. Smart Board application is designed to work with the announcements board. Smart Board is part of a common smart space where users can share announcements, publish and monitor their timely appearance, as well as search information in them. To extend the application had been made some changes in the component of the Smart-M3 platform responsible for the connection and work with a several smart spaces without reconnecting.
